

Company profile eCap Group / eCap Mobility

The companies of the **eCap Group** are experts and pioneers in retrofitting and equipping the mobility, industrial and marine sectors with alternative, future-oriented and emission-free electric drives.

eCap Mobility develops electrified prototypes, small series and concepts for industry and converts commercial vehicles, trucks, buses and systems to electric and/or fuel cell drives. With the distribution of fuel cells from Re-Fire Technology, electricity storage systems from in-house production and services in the form of feasibility studies and concept development for electrification, eCap Mobility offers a wide range of solutions for the decarbonization of drives.

The realisation of fuel cell and battery-based solutions for shipping as well as mobile and stationary power supply from hydrogen and other alternative energy sources are the cornerstones of **eCap Marine**. In addition, the company offers extensive services for electrical drives and systems on board ships, yachts and boats.

eCap Classics stands for turnkey electrical conversions of classic, luxury and sports cars including repair, conception and approval. With manufacturer-independent configuration, your favorite vehicle becomes a fully electric dream car. eCap Classics is a reliable service partner for the inspection, repair and general inspection of e-cars of various brands. In addition, eCap sells accessories and components for electromobility through its own web shop.
